

## Configuration #2

### **Notes:**

- Keep all RF except DVB-T sticks on same board
- Users may want to use this for something other than skimmer
- I now like Config #1 since it reduces #sma connectors
- Medusa use for beacon monitoring, 10m, 6m, 2m, 432m might be a useful option  
I know you can get beacons on 20m/15m but think more useful for VHF users... Its basically a depop option on the base board and front end becomes LNA with filters; which means keep multi-coupler on the mixer board for HF only...
